

# Six tips TO KEEP YOUR RIDE RUNNING SMOOTHLY

FROM YOUR AUTOCAMP CAR FAMILY

1

**Become friends with your owner's manual.**

It all starts here! Your manual can answer basic questions, help you locate things on your car, and provide a recommended maintenance schedule.

2

**Follow your manufacturer's recommended maintenance schedule.**

You can find this in your owner's manual or online. Let us know if you have any questions!

3

**Inspect your wiper blades.** Wiper blades (front and rear) should be smooth and flexible to maintain contact with your windshield. If you see cracks or if the rubber is hard, it's time to have them checked or replaced.

4

**Watch your lights.**

Be sure to regularly check the headlights, tail lights, brake lights, and turn signals to make sure they're working properly. If they aren't, it's time for a new bulb or fuse.

5

**Keep an eye on your tires.** If you see (or feel) bumps anywhere on the tire, if the edges are worn smooth, if a tire can't maintain its recommended pressure, it's time for a tire check with one of AutoCamp's tire experts.

6

**Check your oil.** If your car's oil is too low or too dirty, it could result in serious damage to your engine. Not sure how to check? Let one of AutoCamp's experts check it for you.
